

IN THE ABSTRACT:

Please replace the Abstract with the following new Abstract:

A vehicle headlight, having multiple LEDs provided on a carrier and organized into a group arrangement having an asymmetric design arrived at by starting with an overall symmetric design and providing therein at least one area with non-functional or missing LEDs; and at least one optical element functioning as a common collection lens, wherein the vertical angle of beam spread ϕ is less than 50° and the horizontal angle of beam spread ϕ is in the range of less than 20° relative to the central optical axis of the optical element.
